

A Can of Worms Worth Opening

Naomi Hodges, Florence Kennard, Maria Garcia, Nichola Hodges

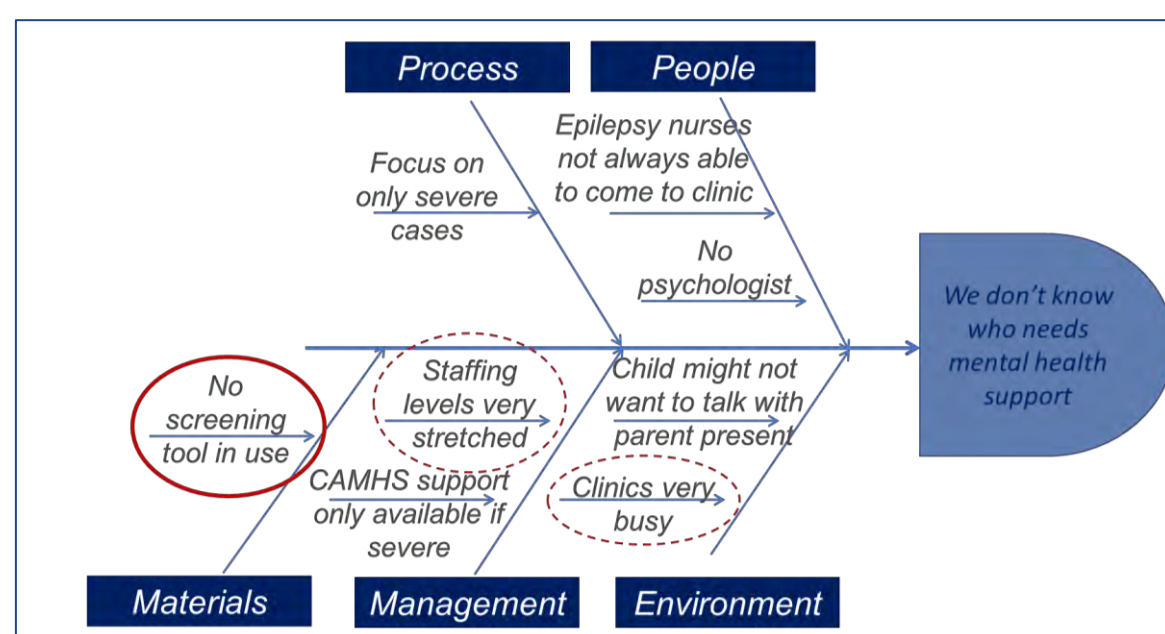

The epilepsy team don't know which children are struggling. Mental health problems don't get picked up until very severe. This is too late and leaves children in pain for too long.

Aim/purpose:

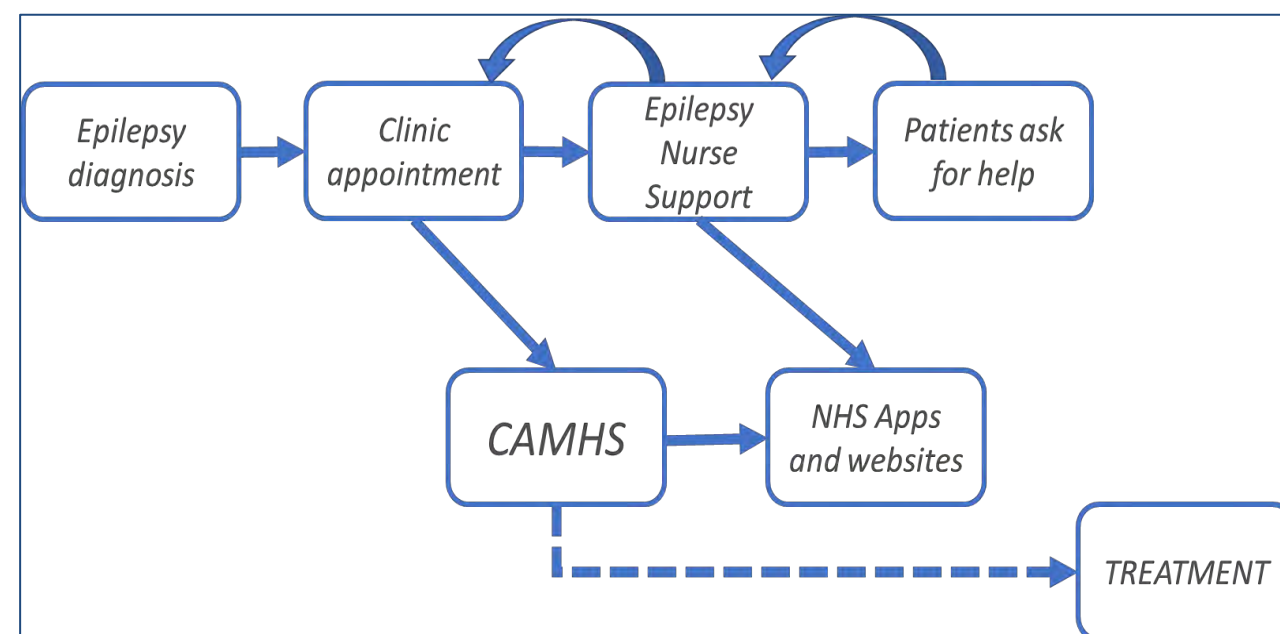

To develop a standardise screening tool to identify the mental health status of children with epilepsy.

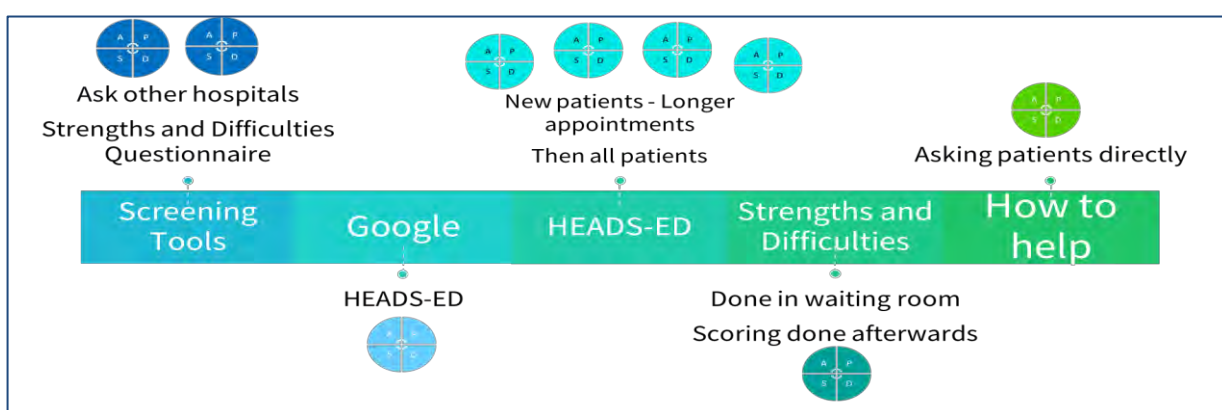

Cause and Effect Fishbone

Process Map

PDSA cycles

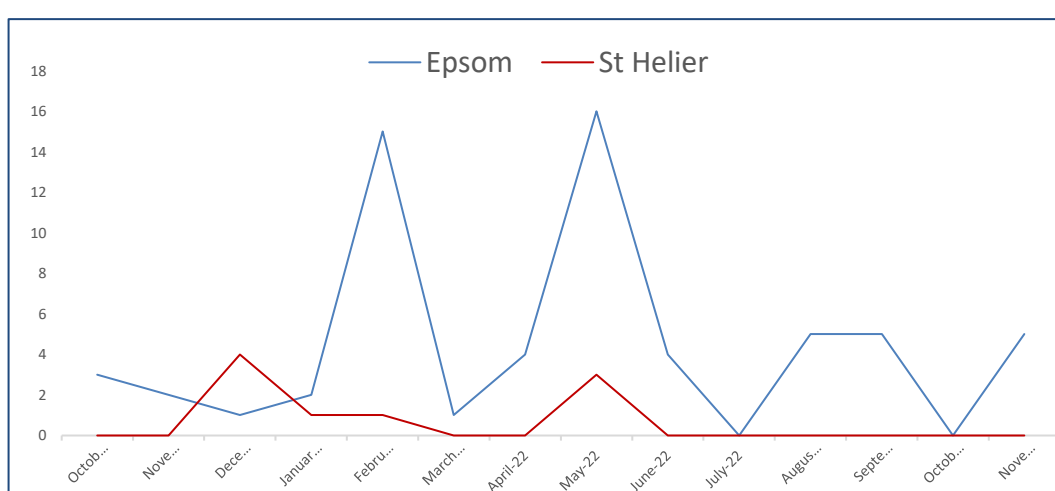

What our tests revealed

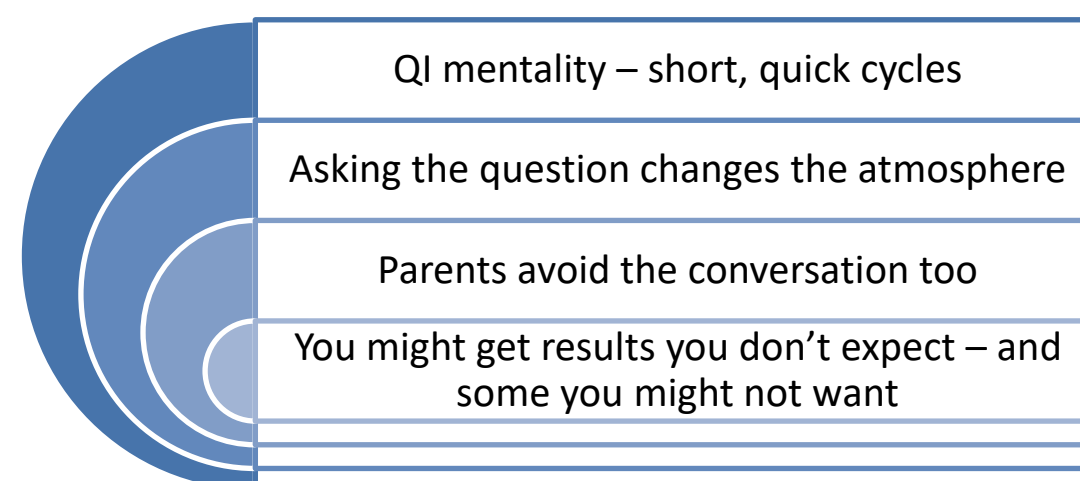

- ☐ Use what's already there
- ☐ Different teams in different hospitals work differently
- ☐ If it's not working - abandon
- ☐ Mental health is a can of worms that needs opening
